

A horizontal timeline diagram with two main sections. The first section is labeled '1 Input' and the second section is labeled '2 Lifecycle'. Both labels are in blue circles. The timeline is represented by a horizontal line with arrows at both ends. There is a vertical tick mark between the two sections.

# Data Sources

-  Incident
-  Bug report
-  Alert
-  Observability data
-  Review
-  Relational data

# Data Processing

- Feature extraction*
- Deduplication*

-  Heuristic & statistics
-  Semantic enrichment
-  Deep learning
-  LLM-driven reasoning

The diagram illustrates the LLM-based issue triage framework, divided into two main stages: **Prioritization** and **Assignment**.

**Prioritization** is further divided into:

- Severity rating**: Includes Text classification (represented by a balance scale icon) and Deep semantic ranking (represented by a bar chart icon with values 1, 2, 3).
- Issue type classification**: Includes Probabilistic modeling (represented by a circular arrow icon) and Knowledge-augmented (represented by a magnifying glass over a document icon).

**Assignment** is further divided into:

- Component assignment**: Includes Supervised learning (represented by a neural network icon), Multi-source modeling (represented by a graph icon with three nodes), and LLM-based inference (represented by the GPT logo).
- Developer assignment**: Includes Information retrieval (represented by a magnifying glass over a document icon) and Task-aware scheduling (represented by a calendar icon with a checkmark).

# Feedback and Adaptation

*User feedback analysis*

*Continuous triage*

-  Probabilistic state modeling
-  Artifact linking & semantic modeling
-  Continuous adaptive triage
-  Semantic intelligence

### 3 Public Datasets

  
  

## 4 Industry Deployment

Companies reported to employ triage practices in the reviewed studies
